BUSINESS PROCESS IMPROVEMENT

A thorough assessment of all "as-is" business processes; including detailed workshops/question and answer sessions with your staff and stakeholders. Development of "future state" process maps. Development of technology flows and requirements to support the recommended "future state" processes. Analysis of the "Gap" between your business needs for technology and its capabilities and Best Practice Recommendations of technology projects to support these changes. We use business process reengineering and Six Sigma methodology to enhance processes throughout your organization. As you continue to manage your day-to-day operations, we take an up close look at the flow of your business.

PHYSICAL/CYBER SECURITY AND BUSINESS CONTINUITY

MAA's team of industry certified security professionals are experts at performing the following comprehensive and encompassing services:

- Vulnerability Assessments
- Cyber Security (including SCADA)
- Penetration Testing
- Business Continuity of Operations Planning
- Disaster Recovery Planning
- Emergency Response Planning
- Physical Security Standards Assessments

STRATEGIC PLANNING

Business needs are always the primary consideration for technology investments. As such, our team follows industry best practices to ensure that our master plans are realistic and implementable by our clients.

MAA recognizes the long-term importance of developing a successful IT Strategic Plan and Roadmap. Our team members bring the following key attributes to our projects:

Our plans get implemented. Our team has a proven track record of developing business and technology strategic plans that are practical and that are justifiable to policy makers.

An understanding of your challenges and changing business environment.

Our team members are at the forefront of the business issues driving businesses and their technology needs.

A proven IT Master Planning Approach that links technology application priorities and spending to business objectives, establishing a "road map" to follow well into the future.

In-depth understanding of technologies and software applications used by agencies with similar missions and of similar size.

NETWORK ADMINISTRATION

MAA is your partner in making sure your technology provides a higher return on your investment. Our staff of experts can design a customized computer network maintenance and IT management solution that works for you.

No matter whether your company is in need of systems management and network consulting services, remote and on-site support, computer network maintenance services, IT management services, IT support, wireless networking, computer network installation, or network and server support – we have a solution.
